D. Sato, Tokyo Institute of Technology

SuperKEKB Upgrade and RF gun development

	KEKB obtained (e+ / e-)	SuperKEKB required (e+ / e-)
Energy	3.5 GeV / 8.0 GeV	4.0 GeV / 7.0 GeV
Charge	e- → e+ / e- 10 → 1.0 nC / 1.0 nC	e- → e+ / e- 10 → 4.0 nC / 5.0 nC
Emittance [mm-mrad]	2100 / 300	6 / 20

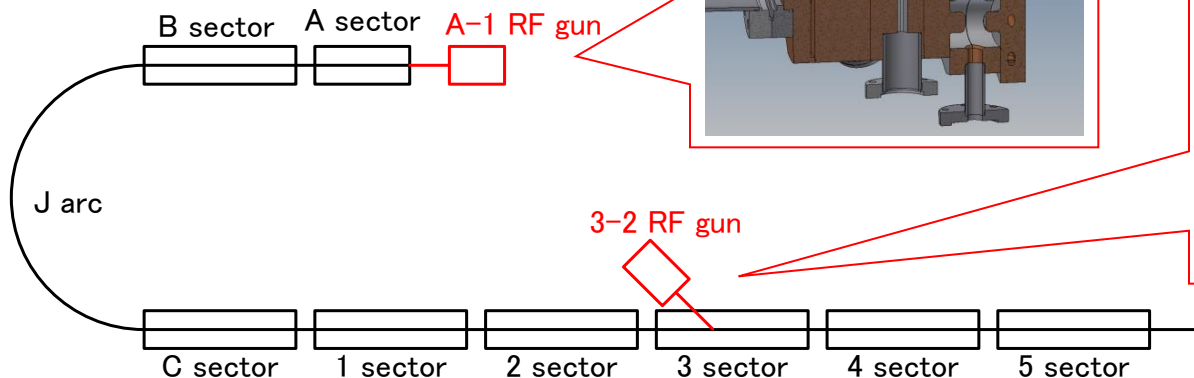

5 nC 10 mm-mrad electron beam generated by **RF gun**.
+ 10mm-mrad emittance preservation is required.

Quasi-travelling side couple
RF-Gun with Yb laser system.
(2013)

Preliminary test using DAW
RF-Gun with Nd laser system
due to earthquake. (2011)

RF-Gun development strategy for SuperKEKB

- Cavity : Strong electric field focusing structure
 - Disk And Washer (DAW) => 3-2, A-1(test)
 - Quasi Traveling Wave Side Couple => A-1
 - => Reduce beam divergence and projected emittance dilution
- Cathode : Long term stable cathode
 - Middle QE ($QE=10^{-4} \sim 10^{-3}$ @266nm)
 - Solid material (no thin film) => Metal composite cathode
 - => Started from LaB_6 (short life time)
 - => Ir_5Ce has very long life time and $QE>10^{-4}$ @266nm
- Laser : Stable laser with temporal manipulation
 - LD pumped laser medium => Nd / Yb doped
 - Temporal manipulation => Yb doped
 - => Minimum energy spread

- RF-Gun
 - **Design of RF-Gun cavity**
 - Quasi travelling wave side couple
 - Cathode
 - Laser
 - Test stand and schedule

RF-Gun for 5 nC

- Space charge is dominant.
 - Longer pulse length : 20 - 30 ps
- Stable operation is required.
 - Lower electric field : $< 120 \text{ MV/m}$
- Focusing field must be required.
 - Solenoid focus causes the emittance growth.
 - **Electric field focus preserve the emittance.**

~~Epxial coupled cavity~~ : BNL

**Annular coupled cavity : Disk and washer
or Side couple**

Electric focusing field by narrow gap

Closed gap makes focus field

Side coupled cavity is one candidate (or DAW / ACS / CDS ...)

Concentrated field
has focusing effect

This structure
has long drift
space

This structure has focusing field.

Long drift space is problem.

Design of a quasi traveling wave side couple RF gun

Normal side couple structure

Quasi traveling wave sidecouple structure

Quasi traveling wave side couple has stronger focusing field

Quasi traveling wave side couple RF gun

This RF gun has total of seven acceleration cavities. These are divided into two standing wave structure of 3 and 4 side coupled cavities respectively.

Cathode cell

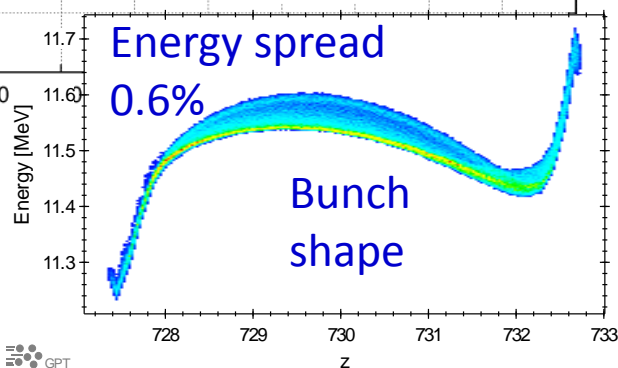

To avoid beam defocusing, emittance growth and field concentration, a lot of parameters were searched for design.

Emittance: 5.5 mm-mrad @ 5 nC

This RF gun can generate 10 nC beam

Beam tracking simulation result

RF-Gun comparison

Quasi traveling wave side couple RF gun
(100 MV/m, 6mm-mrad, 13.5 MeV)

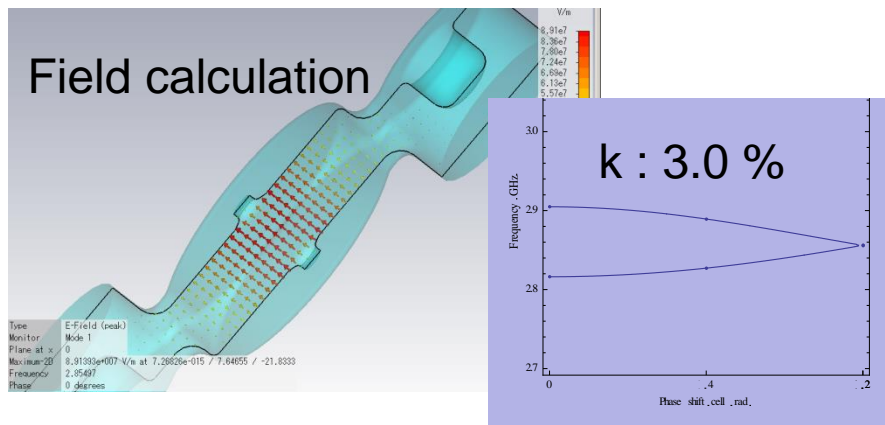

DAW-type RF gun
(90 MV/m, 5 mm-mrad, 3.2 MeV)

BNL-type RF gun
(120 MV/m, 11.0 mm-mrad, 5.5 MeV)

Cavity design

No reflection to klystron

Mechanical design and manufacturing

- RF-Gun
 - Design of RF-Gun cavity
 - **Cathode**
 - **Advantage of LaB6**
 - **Measurement equipment of quantum efficiency**
 - **Laser cleaning & Heat treatment**
 - Laser
 - Test stand and schedule

Cathode : Advantage of LaB_6 or Ir_5Ce

Photocathode Efficiency vs. Lifetime

Justin Jimenez, A Systematic Cathode Study , Ph.D Thesis, Monterey, California

- Low Workfunction (2.8 eV) and enough QE (10^{-4}) at room temperature.
- Inactive in air
- Recover by heating or laser cleaning

**Best choice
for SuperKEKB 5 nC
long time operation**

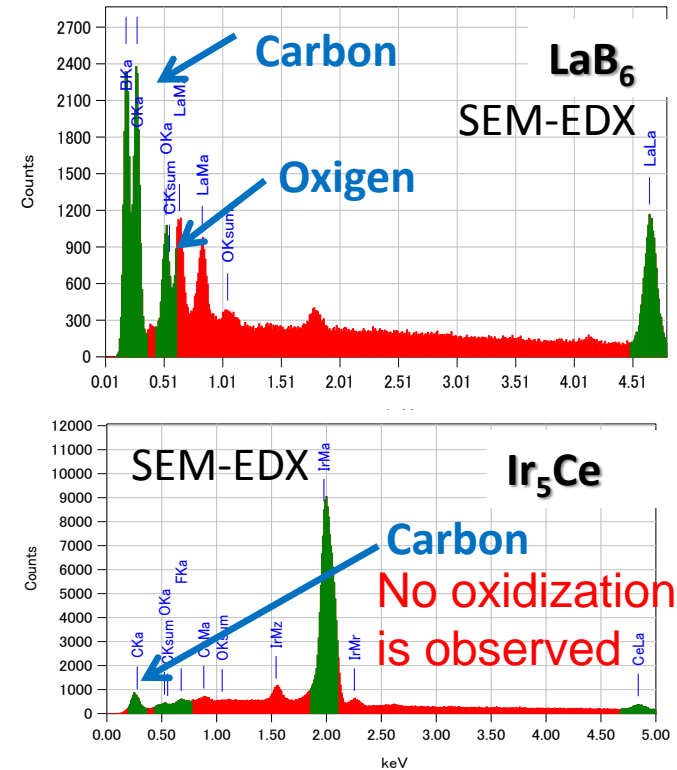

The thermocathodes can also be used as photoemitters [13]. LaB_6 should be noted as a promising photoemitter [14], which has a quantum yield of about 10^{-3} at a laser wavelength of 266 nm and $4 \cdot 10^{-4}$ at 532 nm for face (100).

Physica Scripta. Vol. T71, 39-45, 1997.

Cathodes for Electron Guns
G. I. Kuznetsov

Ir₅Ce Cathode

Quantum efficiency improvement by Laser cleaning

QE Enhancement of IrCe cathode

QE lifetime

- RF-Gun
 - Design of RF-Gun cavity
 - Cathode
 - **Yb Laser for spatial & temporal manipulation.**
 - Test stand and schedule

Energy spread reduction using temporal manipulation

Energy spread of 0.1% is required for SuperKEKB synchrotron injection.

Properties of laser medium

Nd-doped

- 4-state laser is easy to operate.
- High power pump LD is available.
- Large crystal is available
- × Pulse width is determined by SESAM.
(Gaussian)

Yb-doped

- Wide bandwidth => pulse shaping
- Long fluorescent time => High power
- Fiber laser oscillator => Stable
- Small state difference
- × ASE
- × Absorption

Nd laser system for 3-2 RF-Gun

Best for RF-Gun

Ti-doped

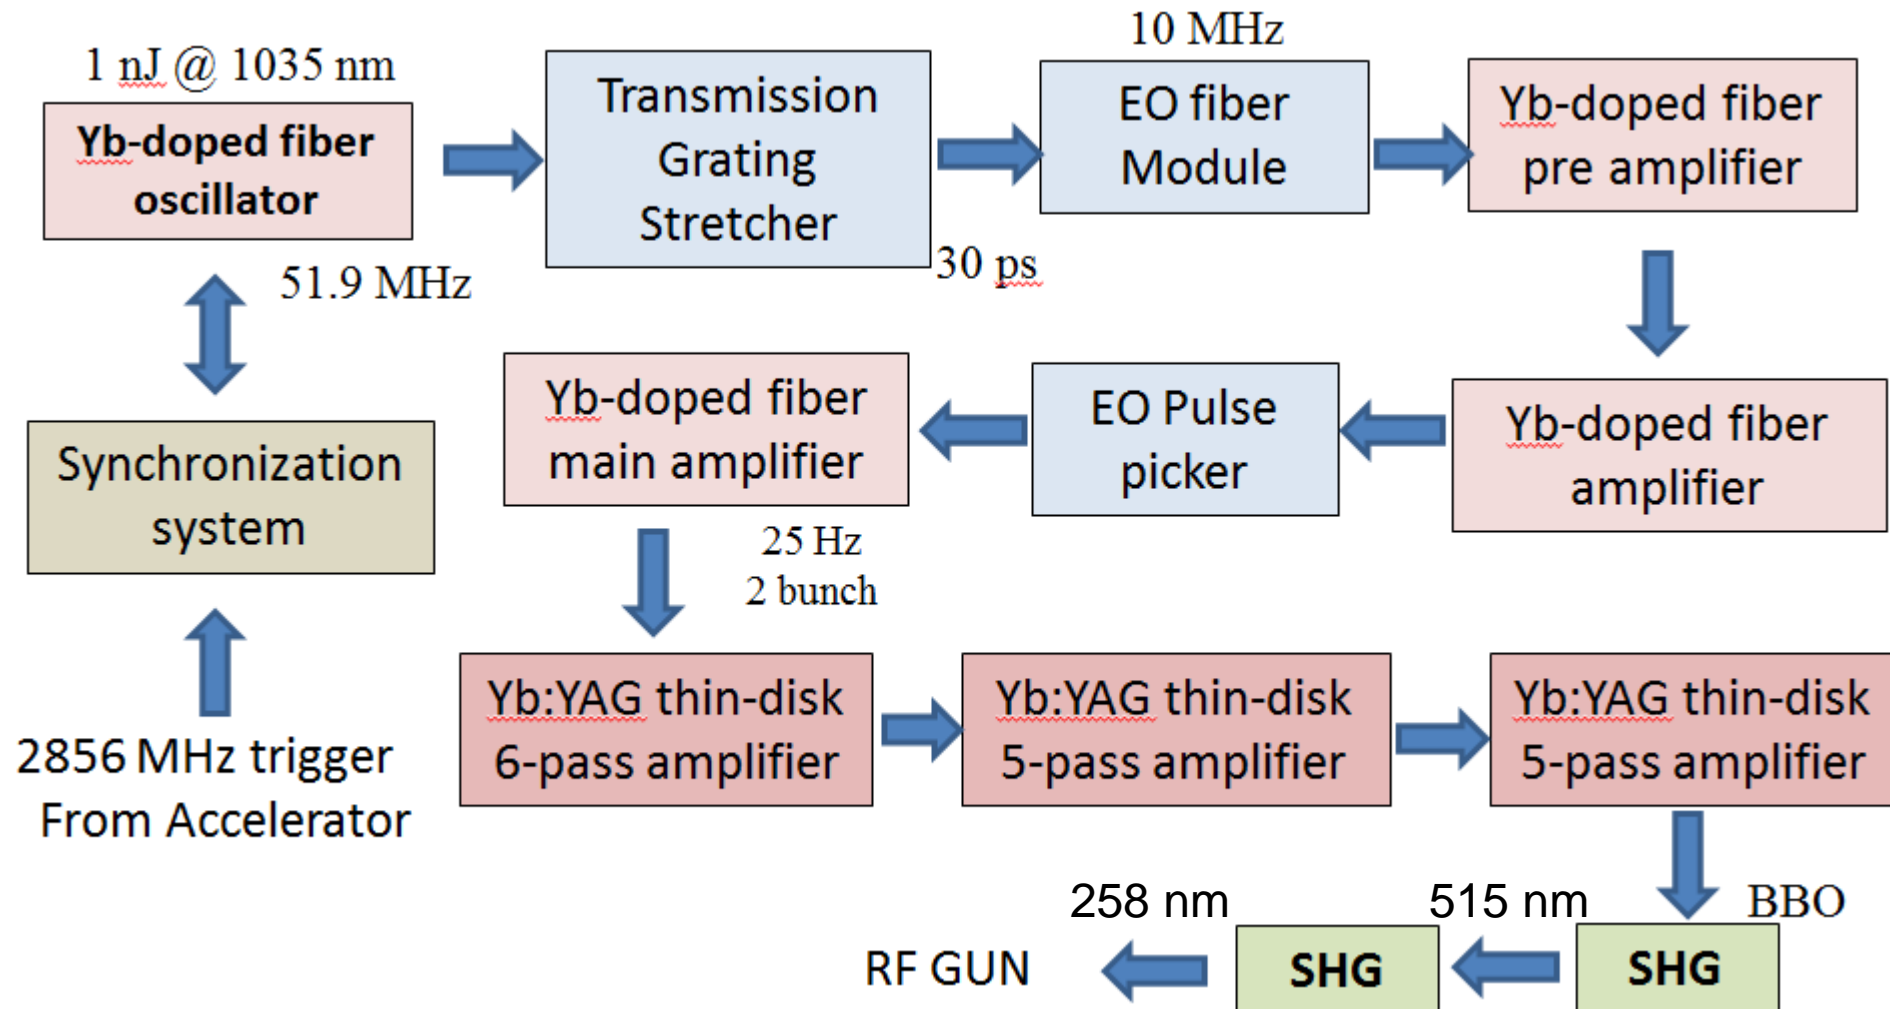

- Very wide bandwidth
 - High breakdown threshold
 - × Low cross section
 - × Short fluorescent time => Q-switched laser is required for pumping
- TW laser is based on Ti-Sapphire

	Material	Nd:YAG	Yb:YAG	Ti:Sapphire
Fluorescence	Wavelength	1064nm	1030nm	660-1100nm
	Fluorescent time	230μs	960μs	3.2μs
	Spectral width	0.67nm	9.5nm	440nm
	Fourier minimum	2.48ps	165fs	2.59fs
	Pulse width			
Absorption	Wavelength	807.5nm	941nm	488nm
	Spectral width	1.5nm	21nm	200nm
	Quantum efficiency	76%	91%	55%

Ti:Sapphire laser system.

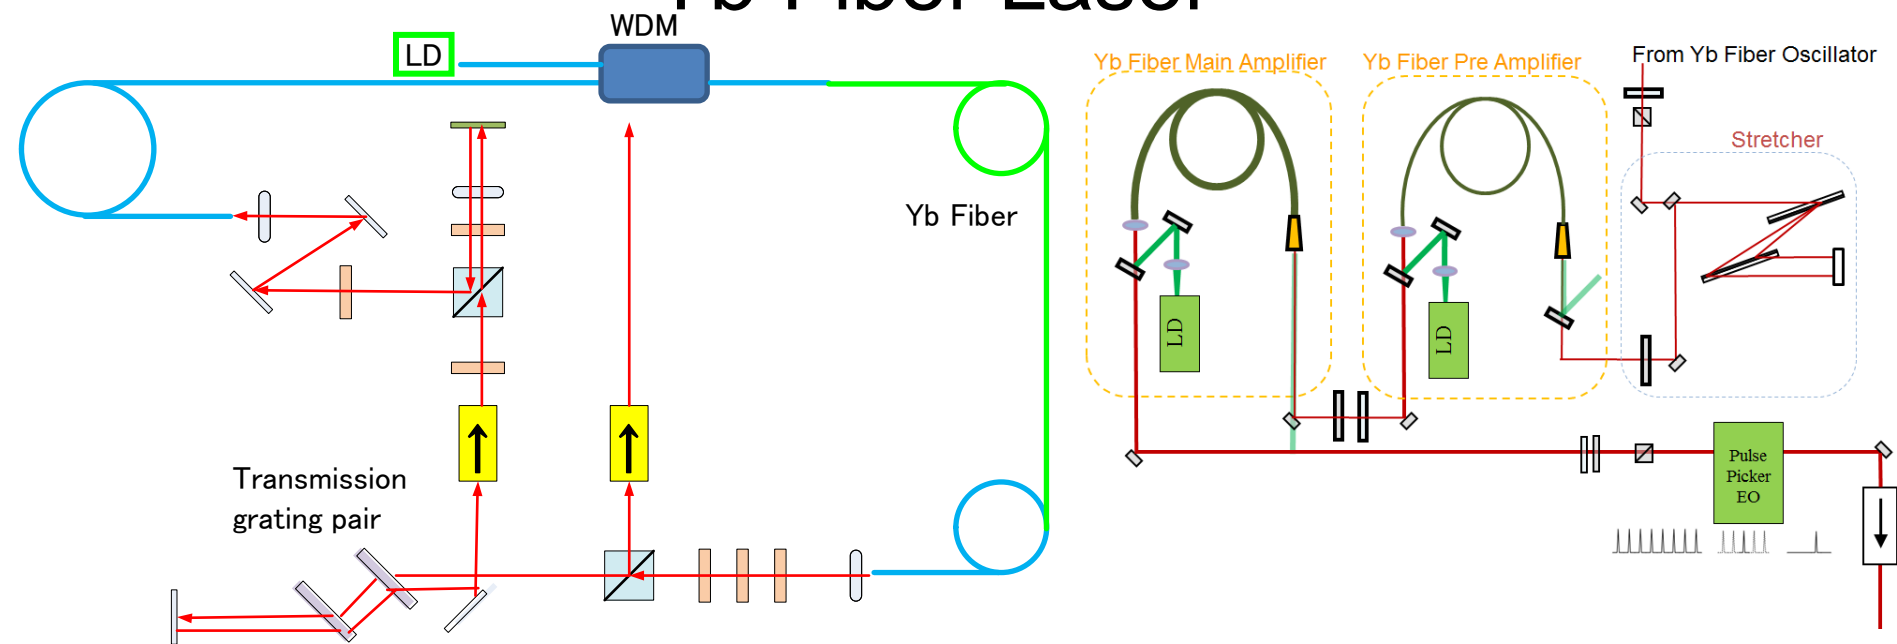

Yb fiber & thin disk hybrid laser system

$QE = 10^{-4} \Rightarrow$ A few mJ @ 258nm, 50Hz is required.

Yb Fiber Laser

Thin-disk multi-pass amplifier

- 0.5 mm Yb:YAG thin-disk
- 3-stage 4-6 multi-pass amplifier

SHG+FHG

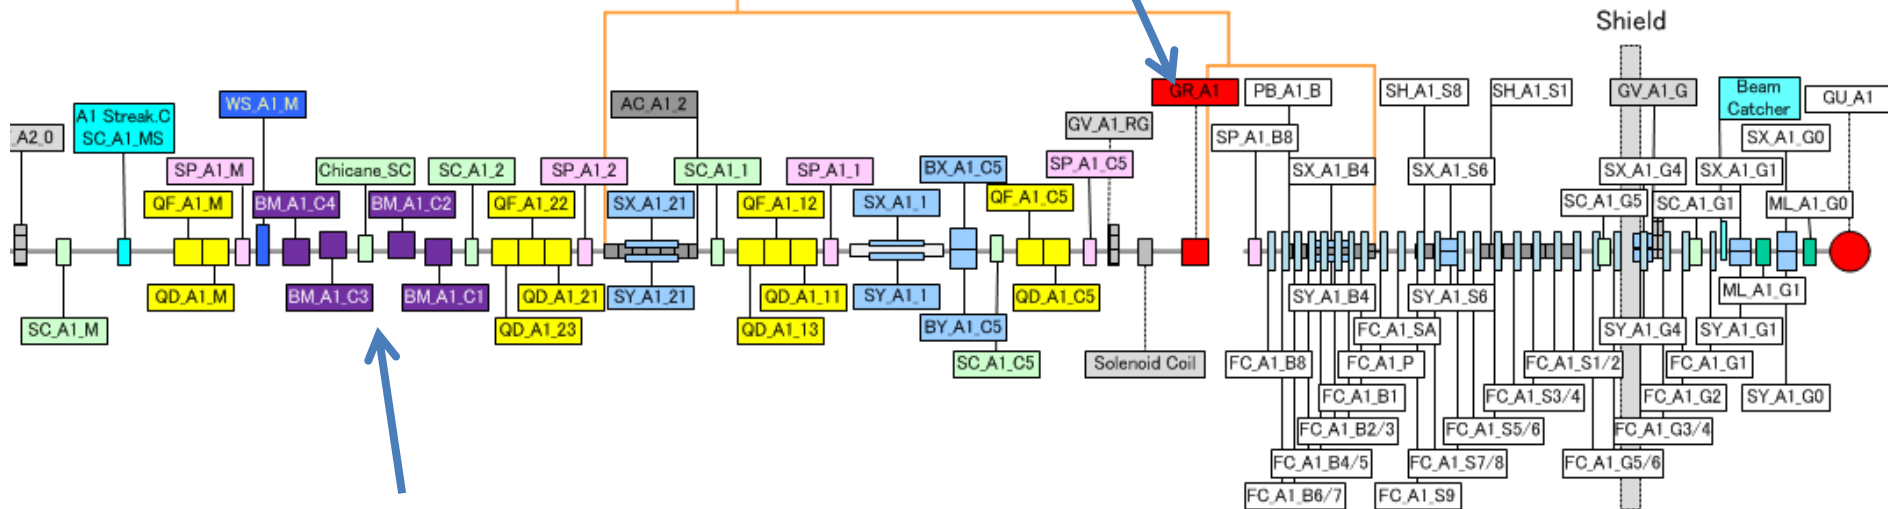

A few mJ @ 258nm

- RF-Gun
 - Design of RF-Gun cavity
 - Cathode
 - Laser
 - **Test stand and schedule**
 - **3-2 RF-Gun for preliminary test & PF injection**
 - **A-1 RF-Gun**

- Quasi-travelling wave side couple RF-Gun
- Yb based laser system

Installed RF-Gun

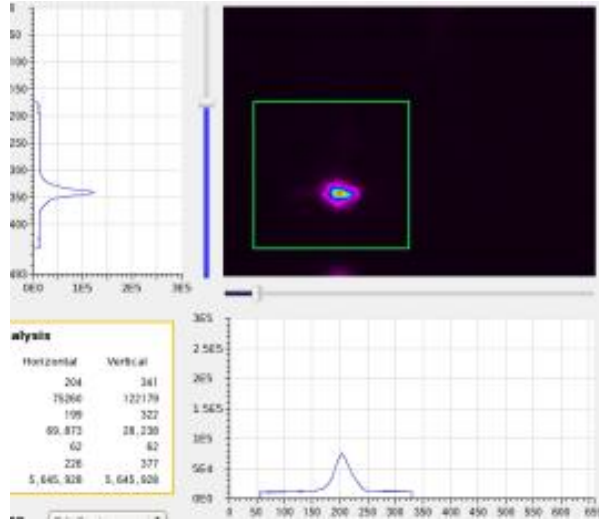

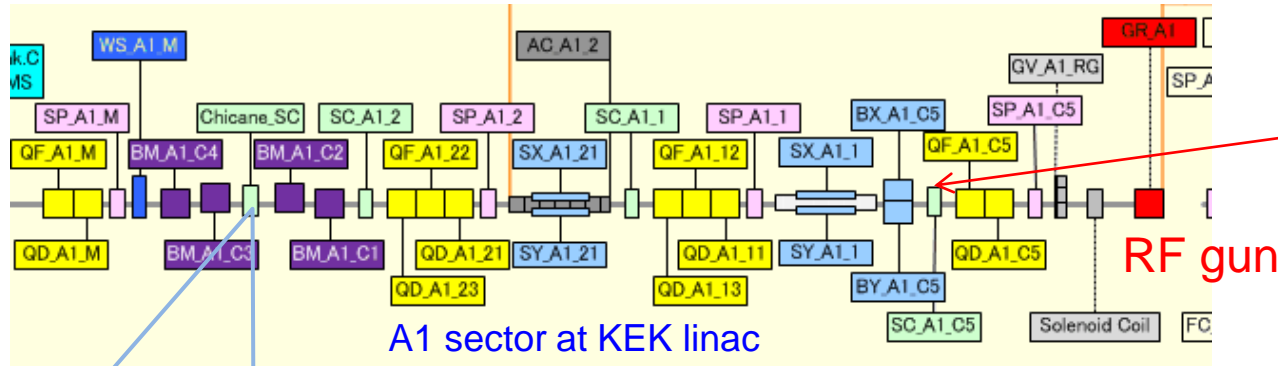

Chicane for bunch compression

Installed RF gun

A-1 RF gun results

5.6 nC bunch charge was observed.

beam size measurement for Q-scan

Q-scan emittance measurement

x

32.7 ± 3.1 mm-mrad

y

10.7 ± 1.4 mm-mrad

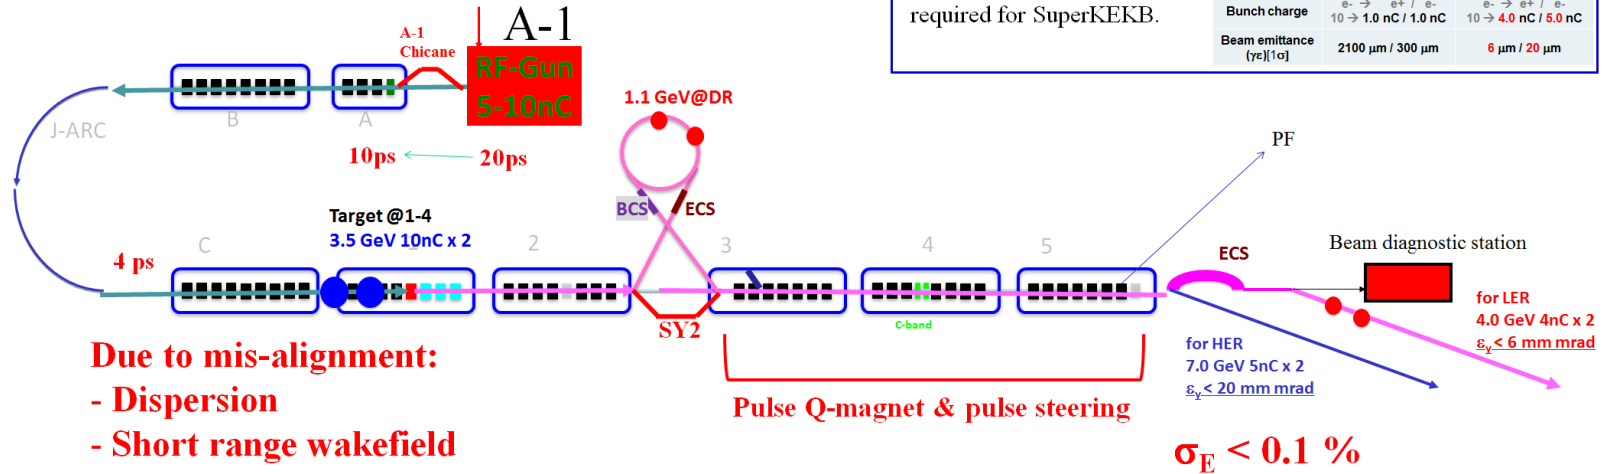

Emittance preservation

Emittance preservation

Longer bunch can reduce
space charge effect inside RF-Gun
and also CSR at J-ARC.

High charge low emittance is
required for SuperKEKB.

	KEKB obtained (e ⁺ / e ⁻)	SuperKEKB required (e ⁺ / e ⁻)
Beam energy	3.5 GeV / 8.0 GeV	4.0 GeV / 7.0 GeV
Bunch charge	10 → 1.0 nC / 1.0 nC	10 → 4.0 nC / 5.0 nC
Beam emittance [μm] [$^\circ$]	2100 μm / 300 μm	6 μm / 20 μm

J-ARC R_{56}

Emittance growth after 500 m

Initial offset

Hardware for emittance preservation

- Alignment

- Continuous monitor (HLS, Wire)
+ Active mover

- Beam based alignment
(Higher mode measurement)

- Temporal manipulation

- Laser pulse shaping
- Bunch compression

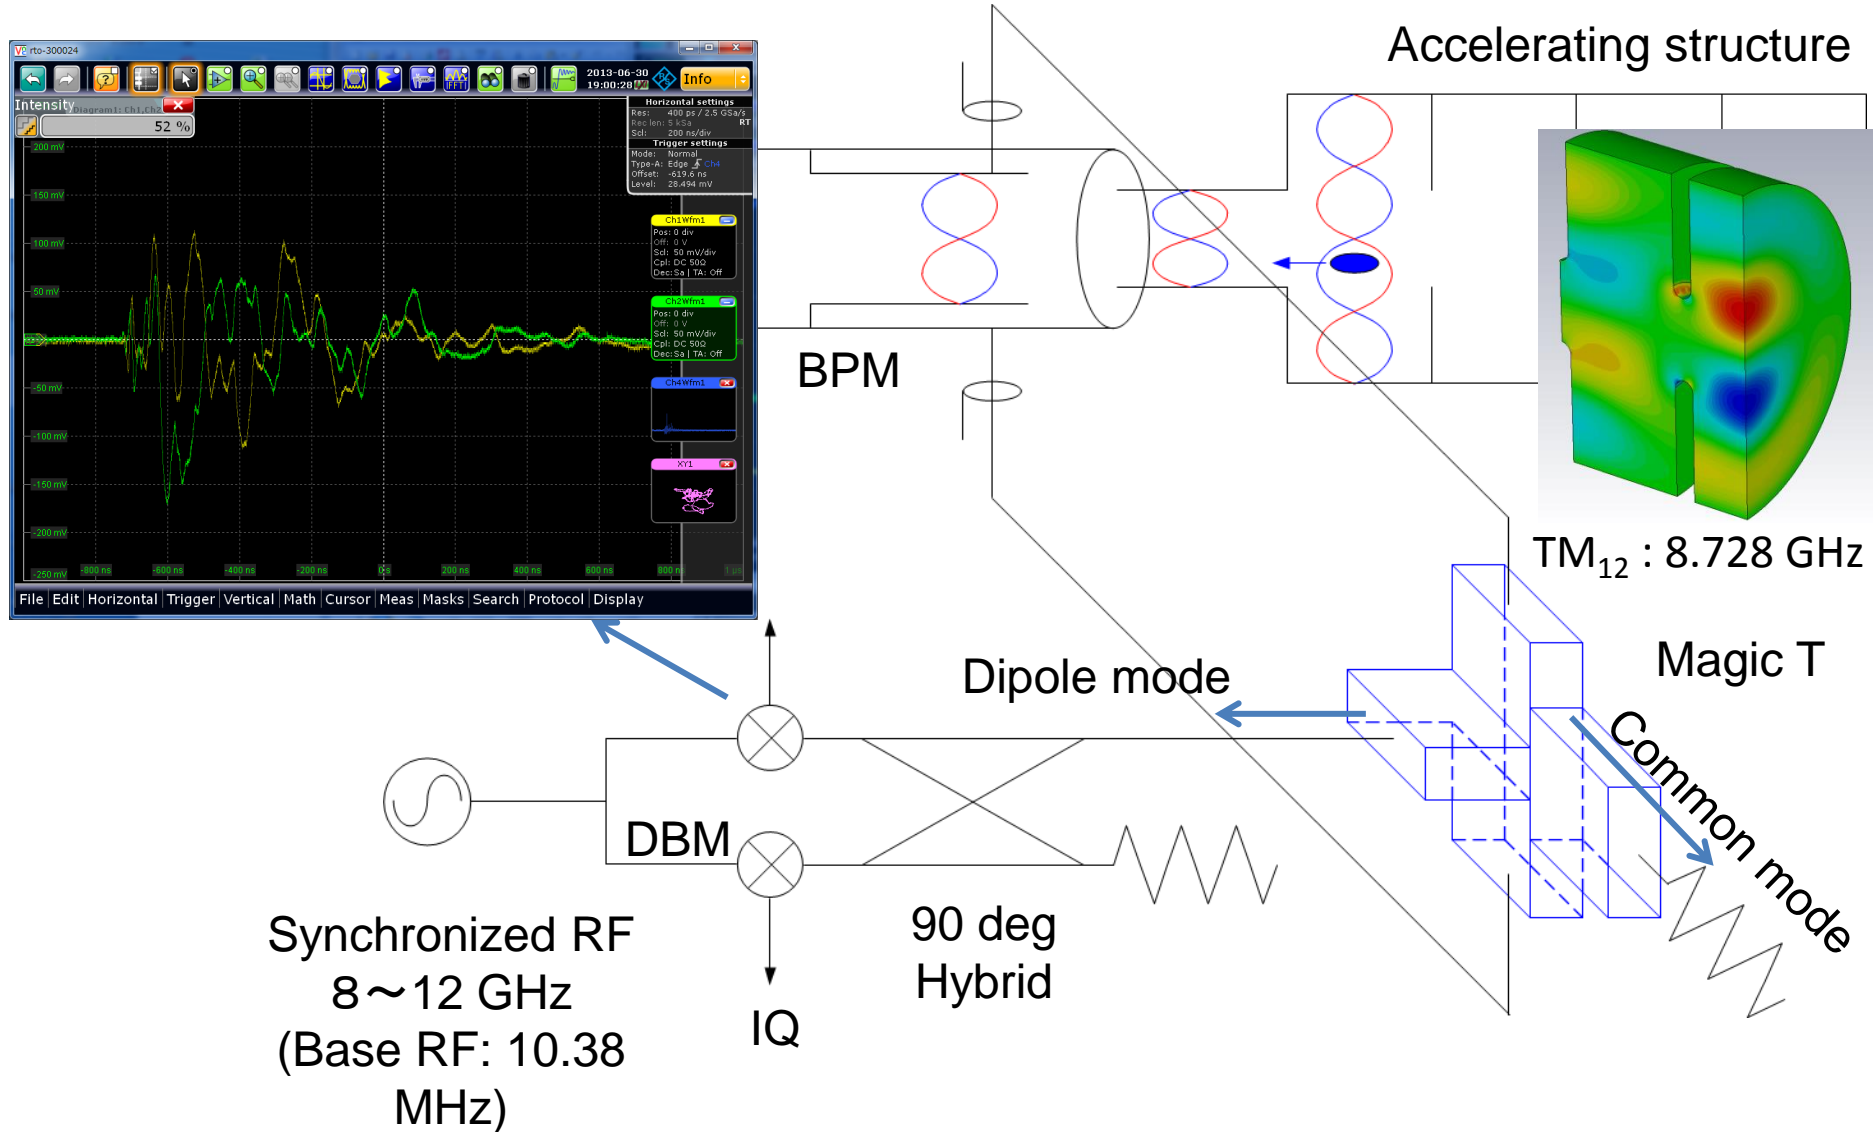

- Beam diagnostics for offset injection

- RF Deflector

Developed by SLAC

Preliminary test for higher order transverse wakefield from accelerating structure.

Summary

- RF-Gun cavity
 - **Quasi travelling wave side couple structure.**
- Cathode
 - Room temperature **Ir₅Ce** cathode has enough QE.
 - Laser cleaning & laser injection angle is effective.
 - R&D for the QE improvement.
- Laser & control
 - **Yb based laser system : A-1 RF-Gun**
 - **Yb-fiber :** Precise RF synchronization.
 - Yb-disk amplifier: High power output.
 - Temporal manipulation Under experiment.
 - Stability / Control: Improved but not enough.
- RF gun comissioning
 - 5.6 nC bunch charge was generated by this RF gun.
- Emittance Preservation
 - Alignment / Bunch compression / Monitor etc.
