## Insertion Region Optics Correction Strategies for FCC-ee

*Monday, 8 May 2023 16:30 (2 hours)*

The Future Circular Electron-Positron Collider (FCC-ee) aims to achieve unprecedented energies and luminosities. This can only be achieved using complex insertion region optics that set high challenges for commissioning and operating the machine. In the following we discuss some of the optics correction methods anticipated to be used to achieve the targets of the FCC-ee.
