## Advanced accelerators for high energy physics and Snowmass AF06

*Monday 8 May 2023 16:30 (2 hours)*

New R&D concepts for particle acceleration, generation, and focusing at ultra high acceleration gradients (GeV/m and beyond) have the potential to enable future e+e- and  $\gamma - \gamma$  colliders to and beyond 15 TeV energies. In addition to proven high gradient and ultra-bright beam generation, these systems have the potential to increase luminosity per unit beam power via short beams, for practical energy recovery to extend the reach of high energy physics, and for fast cooling. They hence have potential to reduce the dimensions, CO<sub>2</sub> footprint, and costs of future colliders, with added potential to reduce power consumption. The last decade has seen tremendous experimental progress in performance, together with development of concepts to address potential collider issues. Conceptual parameter sets for colliders have been developed for e+e- and  $\gamma\gamma$  colliders at a range of energies, which present potentially competitive options with prospects for future cost reduction. In addition to a strengthened ongoing R&D program, continuing to develop these collider concepts in interaction with the collider and high energy physics communities, starting with an integrated set of parameters, is important; as is development of technologies through nearer-term applications. Progress in these concepts, next steps, and results of Snowmass Accelerator Frontier topical group # 6, Advanced Accelerator Concepts (<https://doi.org/10.48550/arXiv.2208.13279>) will be discussed.

### Funding Agency

This work supported by Office of Science, Office of High Energy Physics, U.S. Dept. of Energy under Contracts incl. No. DE-AC02-05CH11231 and DEAC02-76SF00515, & by the National Science Foundation.

### Footnotes

We gratefully acknowledge the input of all of the members of the Accelerator Frontier 6 group of Snowmass, and of colleagues in other Accelerator, Energy, Community and other Frontiers, which went into this report. The report in particular draws on the many white papers submitted, as well as presentations at the Summer Study and preceding meetings, and we appreciate their authors.

### I have read and accept the Privacy Policy Statement

Yes

**Primary authors:** GEDDES, Cameron (Lawrence Berkeley National Laboratory); HOGAN, Mark (SLAC National Accelerator Laboratory); MUSUMECI, Pietro (University of California, Los Angeles); ASSMANN, Ralph (Deutsches Elektronen-Synchrotron)

**Presenter:** GEDDES, Cameron (Lawrence Berkeley National Laboratory)

**Session Classification:** Monday Poster Session

**Track Classification:** MC1: Colliders and other Particle Physics Accelerators: MC1.A16: Advanced Concepts
