Type: **Poster Presentation**

Impact of the neutral molecule trapping on beam lifetime and beam profile

Wednesday, 10 May 2023 16:30 (2 hours)

This proceeding addresses the effect of the neutral molecules trapped by the beam. It is in particular discussed the effect of a non-uniform neutral molecule distribution on the beam profile and the resulting beam lifetime. According to the trapping temperature it is discussed in a general framework how the beam profile is modified and the consequent beam loss.
