## Operation improvements of the actual booster-injector for Elettra 2.0

*Thursday, 11 May 2023 16:30 (2 hours)*

The current injector system, composed by a linac and a synchrotron booster, will be used to inject into the new storage ring.

After 15 years of operation, some upgrade of the instrumentation devices are required to well characterize the beam parameters extracted from the booster, before and after the implementations in action to reduce the beam emittance.
