Recent Development of Cavity Simulator for ESS

Thursday 11 May 2023 16:30 (2 hours)

Polish Electronics Group (PEG) is one of the in-kind partners to the European Spallation Source (ESS) project. One of its tasks is testing the LLRF control systems before installation in the machine. To perform this task, the Cavity Simulator was developed. It simulates the behavior of an amplifier driving a superconducting cavity, both used in medium and high beta sections of ESS' linac. This device has proved its function while installing the medium beta cavities LLRF control systems, but the development process is still in progress. New functionality is still being added, extending the range of possible uses and applications. This contribution describes the latest developments of the Cavity Simulator for ESS. The recent measurement results that present the device's performance are also shown together with the plans for the future.

Funding Agency

Work supported by Polish Ministry of Science and Higher Education, decision number DIR/WK/2016/03.

Footnotes

I have read and accept the Privacy Policy Statement

Yes

Primary author: GRZEGRZOLKA, Maciej (Warsaw University of Technology)

Co-author: CZUBA, Krzysztof (Warsaw University of Technology)

Presenter: GRZEGRZOLKA, Maciej (Warsaw University of Technology)

Session Classification: Thursday Poster Session

Track Classification: MC6: Beam Instrumentation, Controls, Feedback and Operational Aspects:
MC6.T27: Low Level RF
