EuPRAXIA and its italian construction site

Monday, 8 May 2023 15:00 (30 minutes)

The European Eupraxia project has recently been included in the ESFRI roadmap. EuPRAXIA is a world-wide first, new kind of compact facility and will be constructed at two European sites. One of the two sites for Eupraxia will be the INFN LNF at Frascati. The facility will be integrated with the already planned 1GeV linear accelerator.

This talk will cover the status of the technical design of the accelerator, general infrastructure plans and future pilot applications in the user community.
