## Comparison of flat beam PWFA analytic model with PIC simulations

*Monday, 20 May 2024 16:00 (2 hours)*

This paper explores the phenomenon of asymmetric blowout in plasma wakefield acceleration (PWFA), where the transversely asymmetric beam creates a transversely asymmetric blowout cavity in plasma. This deviation from the traditional axisymmetric models leads to unique focusing effects in the transverse plane and accelerating gradient depending on the transverse coordinates. We extend our series of studies on plasma wakefield acceleration (PWFA) by comparing our recently developed analytic model on the blowout cavity shape created by transversely asymmetric long beams, with Particle-in-Cell (PIC) simulations. The analysis focuses on validating the model's ability to predict the behaviors of different beam profiles in this regime.

### Footnotes

### Funding Agency

This work was performed with support of the US Dept. of Energy, Division of High Energy Physics, under contract no. DE-SC0017648 and DESC0009914.

### Paper preparation format

LaTeX

### Region represented

North America

**Primary authors:** MANWANI, Pratik (University of California, Los Angeles); KANG, Yunbo (Particle Beam Physics Lab (PBPL))

**Co-authors:** ANDONIAN, Gerard (University of California, Los Angeles); ROSENZWEIG, James (University of California, Los Angeles); MANN, Joshua (University of California, Los Angeles)

**Presenter:** MANWANI, Pratik (University of California, Los Angeles)

**Session Classification:** Monday Poster Session

**Track Classification:** MC3: Novel Particle Sources and Acceleration Techniques: MC3.A22 Plasma Wakefield Acceleration
