## Cryomodules development for SHINE project

*Wednesday, 22 May 2024 16:00 (2 hours)*

SHINE project requires about 75 cryomodules with superconducting radio-frequency cavities to accelerate the beam to 8 GeV. Key components, technologies of cryomodule have been developing through prototypes and pre-series cryomodules. Up to now, several sets of cryomodule with high-Q cavities have been assembled and tested. We present the development status of SHINE cryomodules, including prototype cryomodules and the first ones for project.
