Using WarpX to simulate linear induction accelerators

Wednesday, 22 May 2024 16:00 (2 hours)

This study is a review of WarpX, a particle-in-cell code optimized for high performance computing at the exascale, and its development towards the simulation of linear induction accelerators.

Footnotes

Funding Agency

This work was performed under the auspices of the U.S. Department of Energy by Lawrence Livermore National Laboratory under Contract DE-AC52-07NA27344.

Paper preparation format

LaTeX

Region represented

North America

Primary author: BASSO, Edward (Lawrence Livermore National Laboratory)

Presenter: BASSO, Edward (Lawrence Livermore National Laboratory)

Session Classification: Wednesday Poster Session

Track Classification: MC2: Photon Sources and Electron Accelerators: MC2.A08 Linear Accelerators
