ImpactX space charge modeling of high intensity linacs with mesh refinement

Wednesday, 22 May 2024 16:00 (2 hours)

The code ImpactX represents the next generation of the particle-in-cell code IMPACT-Z, featuring s-based symplectic tracking with 3D space charge, parallelism with GPU acceleration, adaptive mesh-refinement, modernized language features, and automated testing. While the code contains features that support the modeling of both linear and circular accelerators, we describe recent code development relevant to the modeling of high-intensity linacs (such as beam transport for the Fermilab PIP-II upgrade), with a focus on space charge benchmarking and the impact of novel code capabilities such as adaptive mesh refinement.

Footnotes

Funding Agency

This work was supported by the Director, Office of Science of the U.S. Department of Energy under Contracts No. DE-AC02-05CH11231 and DE-AC02-07CH11359.

Paper preparation format

Region represented

North America

Primary author: MITCHELL, Chad (Lawrence Berkeley National Laboratory)

Co-authors: HUEBL, Axel (Lawrence Berkeley National Laboratory); VAY, Jean-Luc (Lawrence Berkeley National Laboratory); QIANG, Ji (Lawrence Berkeley National Laboratory); GARTEN, Marco (Lawrence Berkeley National Laboratory); LEHE, Remi (Lawrence Berkeley National Laboratory); SANDBERG, Ryan (Lawrence Berkeley National Laboratory)

Presenter: MITCHELL, Chad (Lawrence Berkeley National Laboratory)

Session Classification: Wednesday Poster Session

Track Classification: MC5: Beam Dynamics and EM Fields: MC5.D11 Code Developments and Simulation Techniques
