Assessing and Increasing the sustainability of future accelerator based facilities

Wednesday 4 June 2025 11:00 (30 minutes)

The long term sustainability of future accelerators is now a crucial problem for our community. Many groups and collaborations are actively working in this area (e.g. European projects included IFAST and iSAS, RUEDI (STFC) has recently published a case study for the project lifecycle, Centre of Excellence in Sustainable Accelerators is now being vigorously pursued in the UK with CERN backing, European LDG working group, etc). This talk will review the wider community efforts and highlight where good progress is being made and where future efforts are planned or required.

Footnotes

Funding Agency

Primary author: SHEPHERD, Ben (Science and Technology Facilities Council)

Presenter: SHEPHERD, Ben (Science and Technology Facilities Council)

Session Classification: WEYD:Accelerator Technology and Sustainability (Invited)
