Advanced Growth and Characterization of Alkali Antimonide Photocathodes for Bright Beam Applications

Thursday 14 August 2025 16:00 (2 hours)

The properties of the photoemitting electron sources are the most determining factors contributing to the performance of the most advanced electron accelerator applications such as particle colliders, X-ray free electron lasers, ultra-fast electron diffraction and microscopy experiments. Therefore, low mean transverse energy (MTE), high quantum efficiency (QE) along with long operational lifetime and robustness under high electric fields and laser fluences must be demonstrated by the photocathode for these bright beam applications. Recent investigations have revealed that the epitaxial growth of single crystal cesium antimonides can be achieved by photocathode growth on lattice matched substrates. In this letter, the experimental setup for highly promising alkali antimonide photocathode growth by molecular beam epitaxy on lattice matched substrates and in-situ characterization with reflection high-energy electron diffraction (RHEED) has been presented. To adapt the L-band RF gun of Argonne Cathode Test-stand (ACT) for extensive testing of alkali antimonides in real accelerator conditions, compatible cathode plug design and smooth transportation process have been developed and also described in this paper.

Please consider my poster for contributed oral presentation

Yes

Would you like to submit this poster in student poster session on Sunday (August 10th)

Yes

Footnotes

Funding Agency

I have read and accept the Privacy Policy Statement

Yes

Author: HASAN, Tariqul (Northern Illinois University)

Co-authors: WISNIEWSKI, Eric (Argonne National Laboratory); CHEN, Gongxiaohui (Argonne National Laboratory); POWER, John (Argonne National Laboratory); CHUBENKO, Oksana (Northern Illinois University); DORAN, Scott (Argonne National Laboratory)

Presenter: HASAN, Tariqul (Northern Illinois University)

Session Classification: THP: Thursday Poster Session

Track Classification: MC2 - Photon Sources and Electron Accelerators
